

Scottie

MARK GILLESPIE (2024)

This model was designed to be folded out of a chopstick wrapper, but can be folded out of any long rectangle! The paper's precise aspect ratio is not too important—it just has to be pretty long.

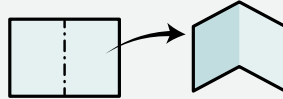

NOTATION

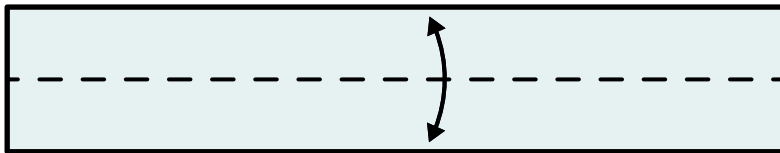

-  Colored side
-  Light side

Valley fold

Mountain fold

fold and unfold

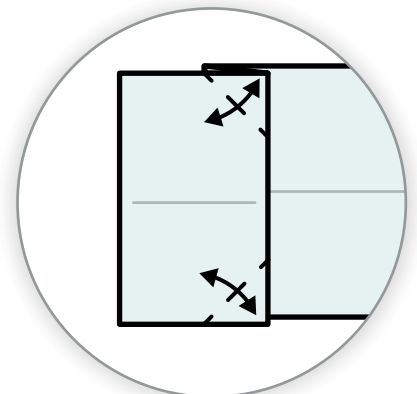

*pleat. see finished pleat in next diagram.
width should be a quarter of the paper's height. make sure to leave slightly more than this width sticking out the end to make the dog's face*

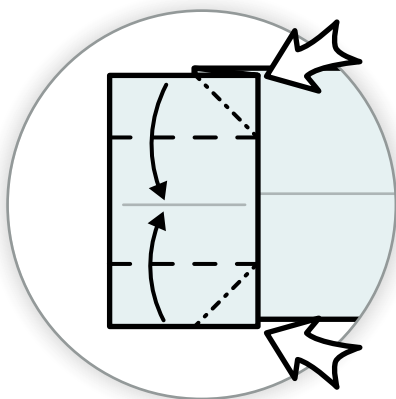

slightly wider than a quarter of the paper's height

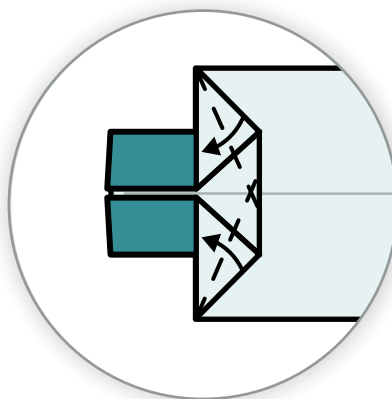

finished pleat

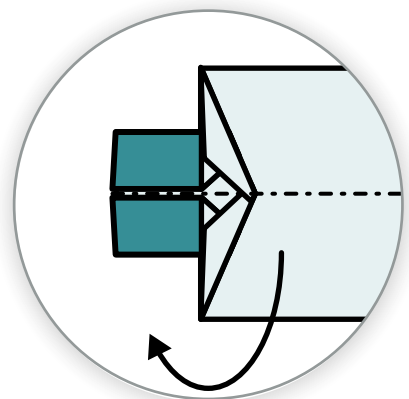

fold and unfold

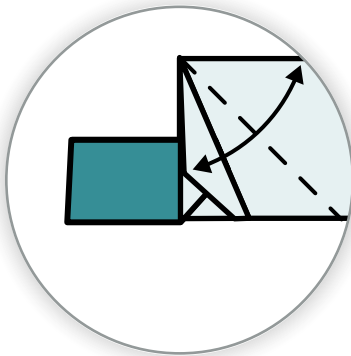

*spread squash.
top and bottom edges should be folded to center line*

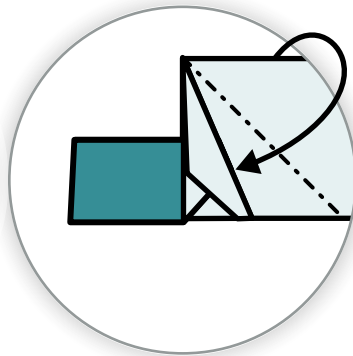

bisect corner angles

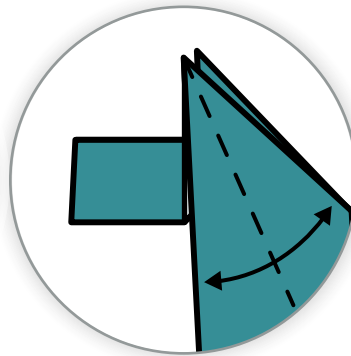

fold in half

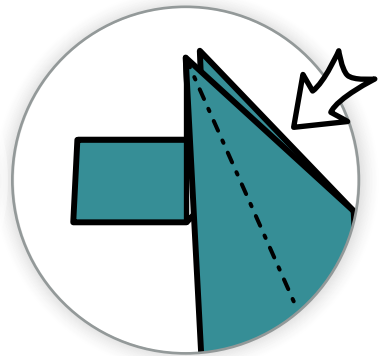

fold and unfold

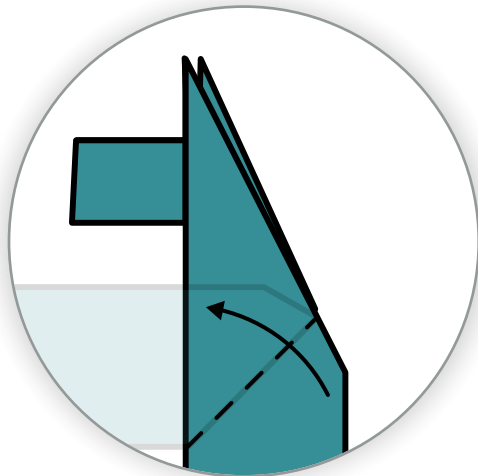

outside reverse fold

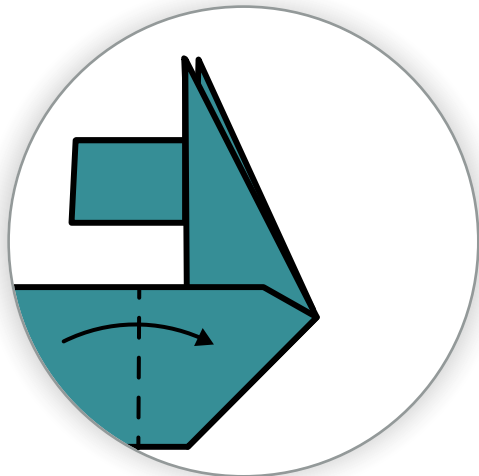

*fold and unfold.
usually I fold just short
of the angle bisector*

sink

*valley fold.
make sure top edge
lies parallel to head*

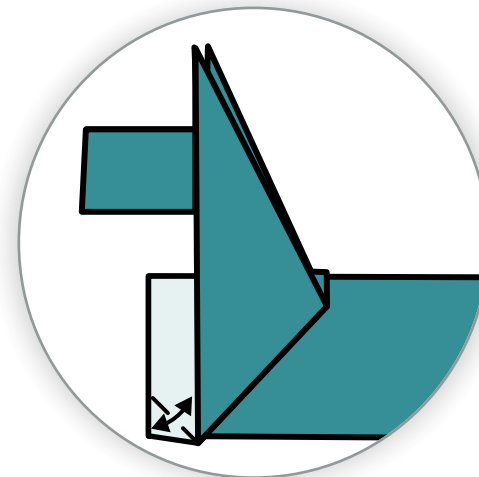

valley fold back

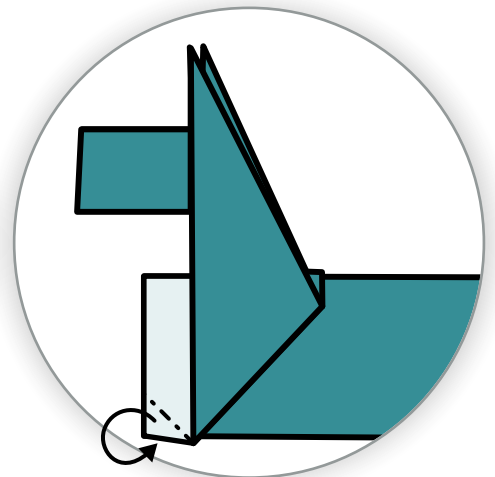

unfold

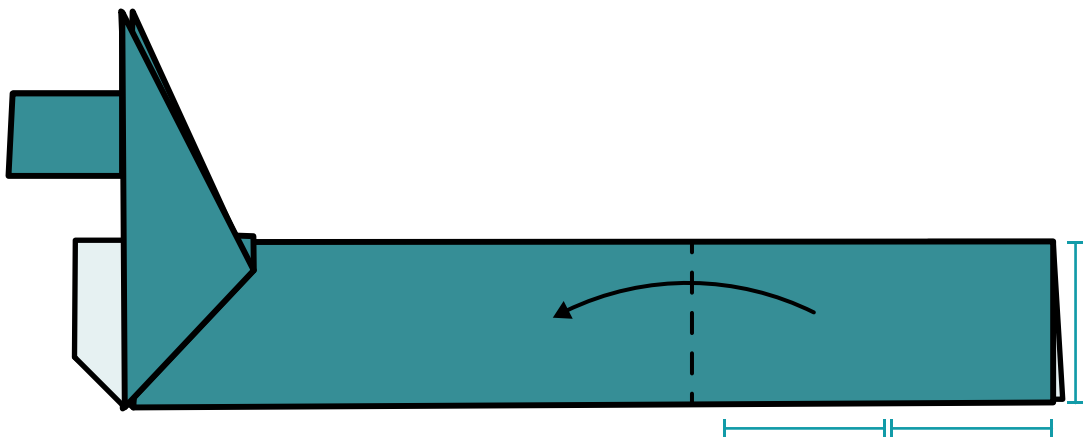

*reverse fold along
the two last creases*

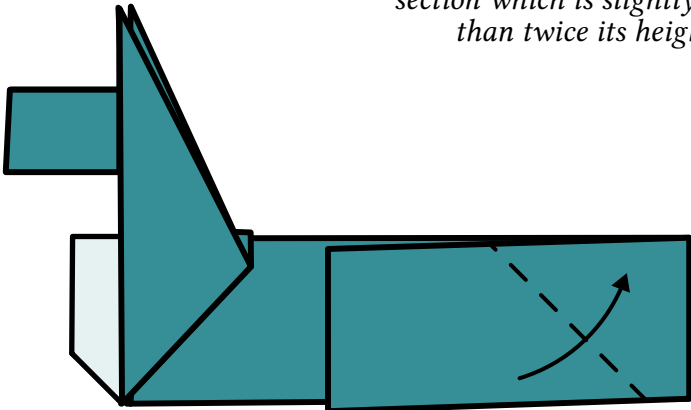

*fold and unfold
(repeat on both sides)*

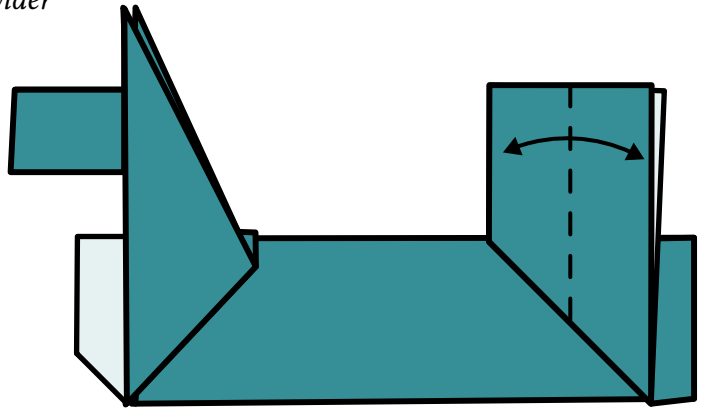

reverse fold

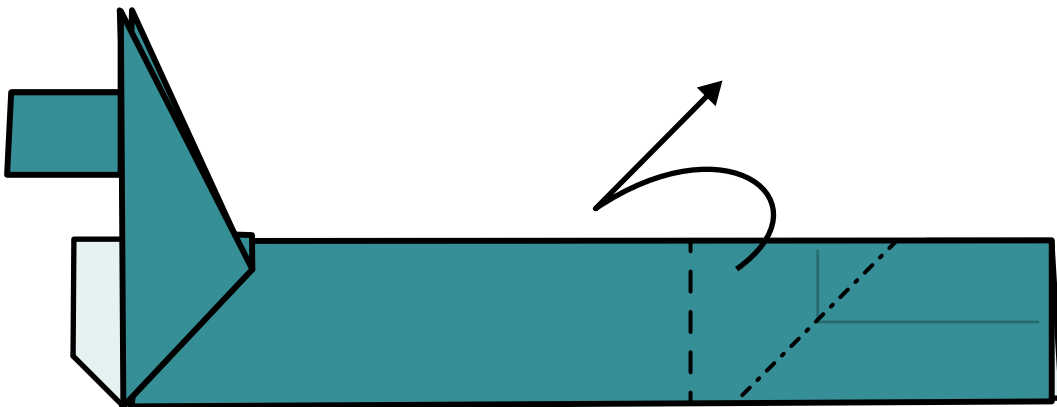

fold back the end. try to fold a section which is slightly wider than twice its height

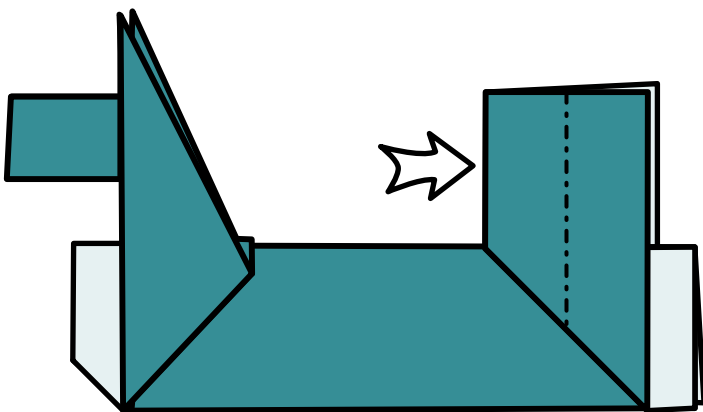

fold up

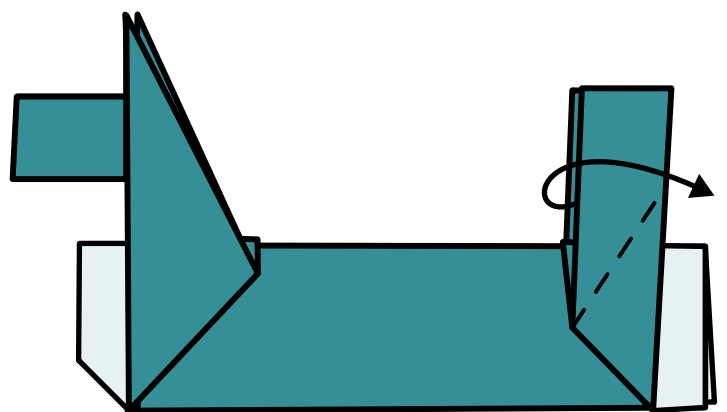

fold and unfold

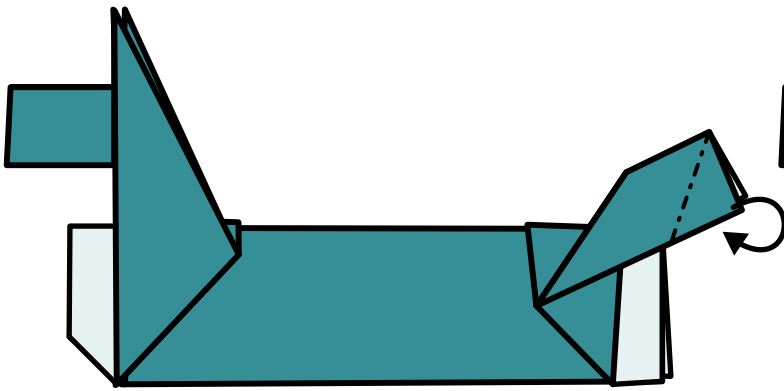

reverse fold along existing creases

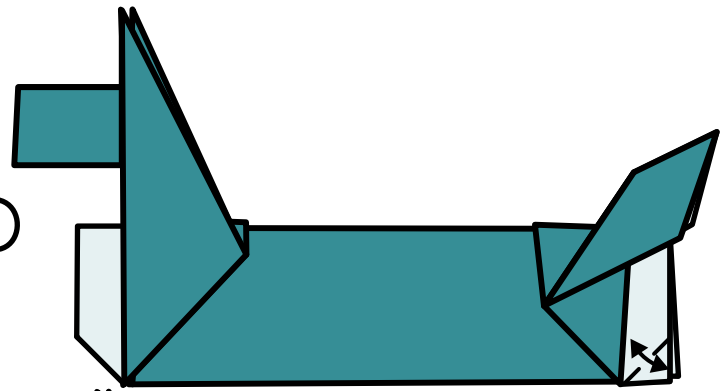

sink

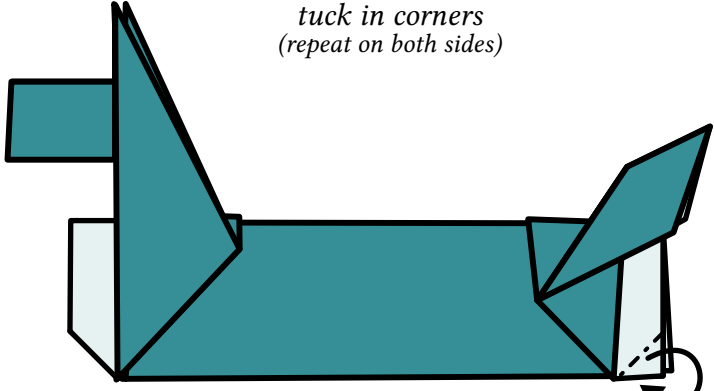

outside reverse fold

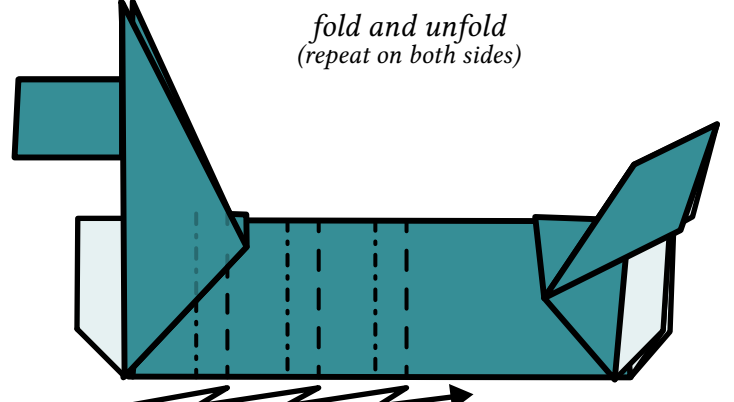

*tuck in corners
(repeat on both sides)*

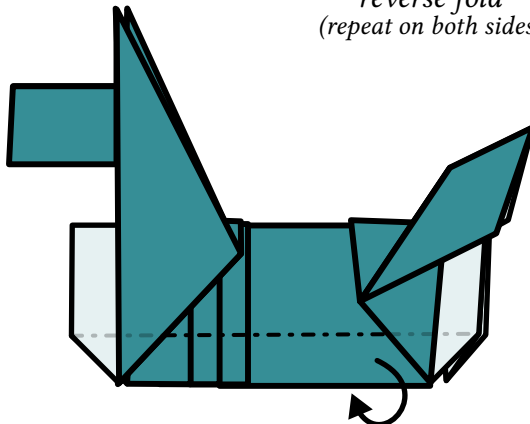

*fold and unfold
(repeat on both sides)*

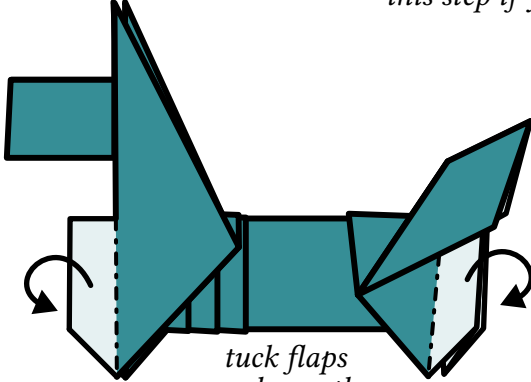

*reverse fold
(repeat on both sides)*

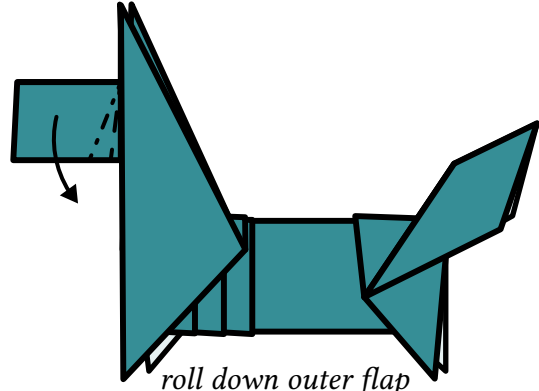

*do some pleats to shorten body. you can skip
this step if your body is already short enough*

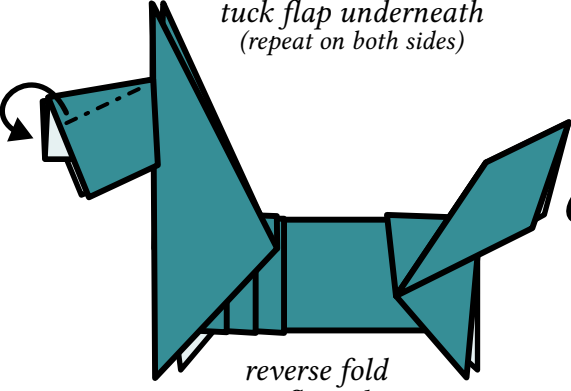

*tuck flap underneath
(repeat on both sides)*

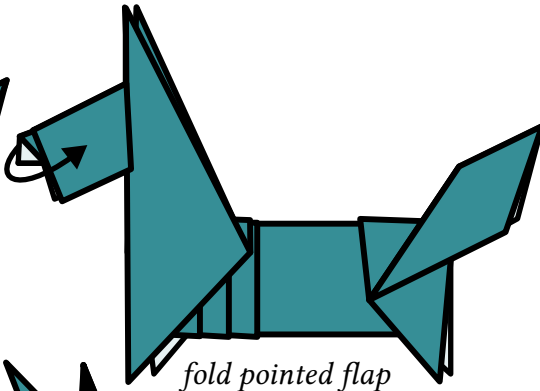

*tuck flaps
underneath*

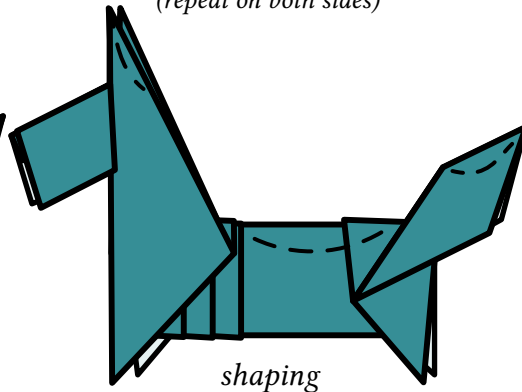

*roll down outer flap
(repeat on both sides)*

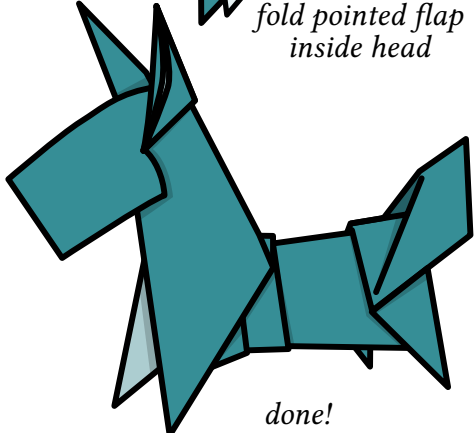

*reverse fold
extra flaps down*

*fold pointed flap
inside head*

*shaping
(optional)*

done!
